

CELLUMASH 12,5 KG

CelluMash is a long-fiber cellulose product that can be used as a pressing aid for fruit purees with a weak structure. The advantages of using CelluMash are:

- Increased efficiency due to better juice flow (self-dripping)
- Better drainage of the press because mucous substances bind to the fibers
- No additional disposal costs as CelluMash is 100% biodegradable and can be disposed of with pomace

Dosage: Depending on the quality of the pulp, the dose is 0.75 - 3 kg of CelluMash per 100 kg of crushed fruit, fruit pulp. CelluMash should be added to the batch immediately before pressing. Make sure CelluMash is evenly distributed throughout the fruit pulp.

Packaging: 12.5 kg.

Example: Strawberry processing
